

# ZenSOC Platform

## Where predictive precision meets adaptive security

Empower your security strategy with our prescriptive platform where predictive precision meets adaptive defense, delivering streamlined threat management and round-the-clock protection.

### Success Story

Expanding possibilities: Our proven track record of success

#### **Security operations, platform engineering, and management**

Client: A leading US-based pharmaceutical company. We enhanced infrastructure security through our ZenSOC Platform, offering mature incident management, custom alerts, log source configuration, and advanced threat detection capabilities.

**We achieved 70 percent fewer false positives, reduced MTTR by 60 percent, and increased threat visibility by 80 percent.**

### **Enhanced security, rapid response, and complete support**

Client: A leading oil and gas company. We leveraged the ZenSOC Platform for transition, offered 24x7 support, conducted threat hunting, and handled patching efficiently.

**Ensured incident response within 15 minutes, with fewer false positives, and enhanced security management using escalation matrix and runbooks.**

### Key offerings

- Reduced incident response time and enabled real-time tracking of KPIs and SLAs
- Efficient and streamlined collection and integration of security data
- Automated incident response
- Enhanced incident remediation processes

### Benefits

- State-of-the-art platform featuring a modular design, high-performance capabilities, and a scalable architecture
- Rapid results with tailored MITRE ATTACK-based use cases, ensuring 10x faster time-to-value with expertly crafted playbooks
- Prescriptive Security Operation Center (SOC) for proactive security monitoring and strengthening threat detection, response, and mitigation capabilities effortlessly
- Transparent and cost-effective pricing model with fixed charges based on EPS or capacity reservation (OPEX model), guaranteeing clarity and predictability in expenses
- Personalized support for activities like malware analysis, reverse engineering, and brand monitoring, ensuring comprehensive insight into potential threats
